

Succesfuld implementering af klinisk retningslinje for fysioterapi til patienter med ALS på de danske hospitaler

Signe Versterre, Cand. scient. i fysioterapi
Udviklingsfysioterapeut, Rigshospitalet -Glostrup

Fagkongres 2018

Baggrund - ALS

- Amyotrofisk lateral sclerose – en progredierende neurodegenerativ sygdom.
- Ætologien er ukendt og der findes ingen behandling der kan stoppe sygdommen
- 400 patienter i DK lever med ALS. Ca. 50% lever 30 måneder efter symptomdebut.
- 10 hospitaler i DK har et ALS-team
- Stiller store krav til de fagprofessionelle

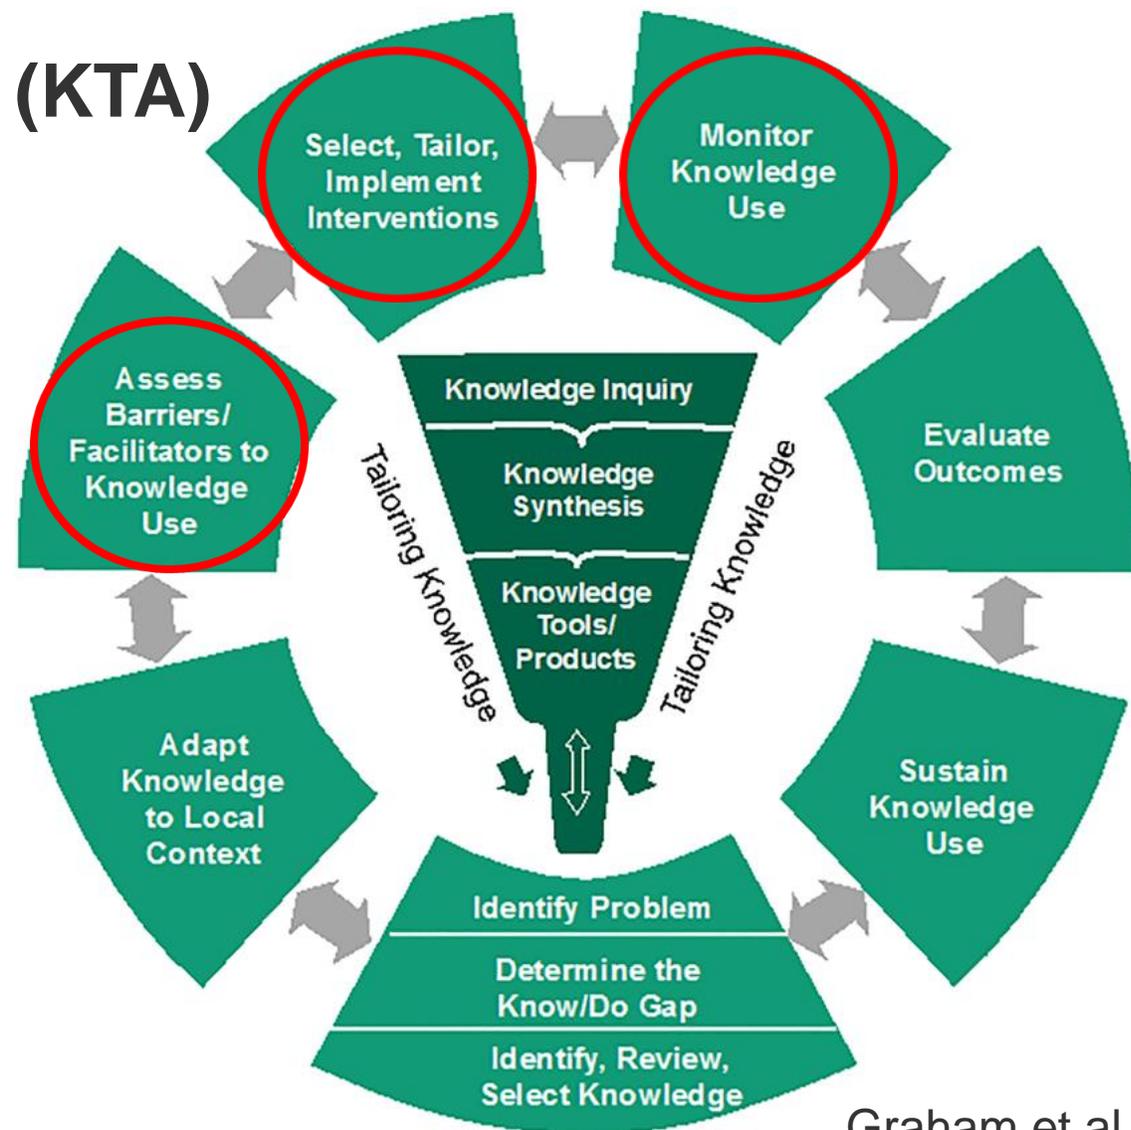

Baggrund – Klinisk retningslinje

- Faglig underen nationalt
- Kliniske spørgsmål nationalt
- Systematisk udarbejdet (Center for Kliniske Retningslinjer og Cochrane)
- Udkast i høring og testet i praksis
- Publicering af en National klinisk retningslinje 2014

Metode - Knowledge to Action (KTA)

Hospitaler med ALS-team inkluderes i:

- **Implementeringsprocessen**
 - Barriere/facilitator analyse
 - Implementering plan
- **Måling af guideline brug**
 - Nationalt tværsnitsstudie

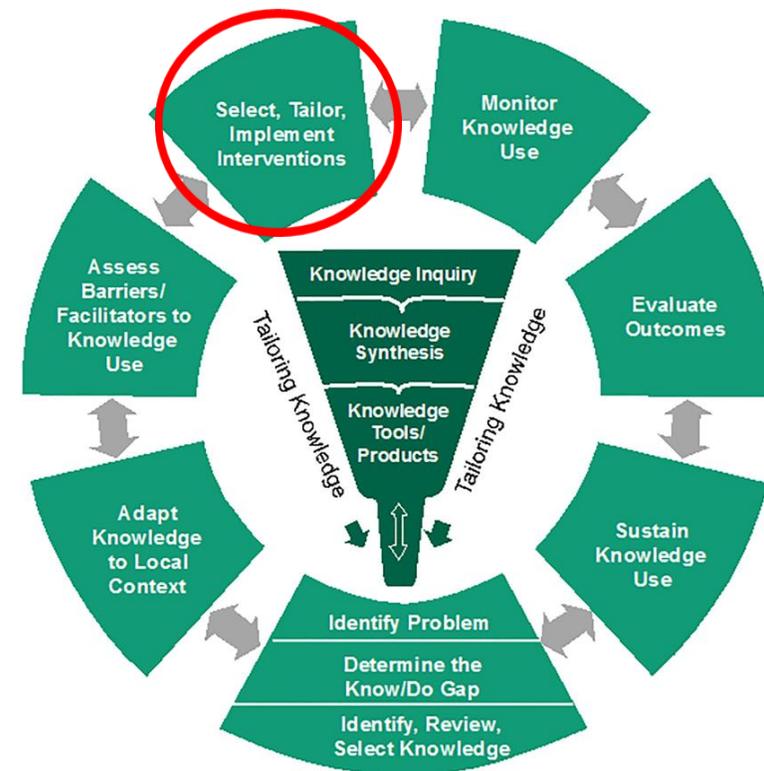

Graham et al, 2013

Resultater – Barriere- og facilitatoranalyse

| | Facilitators | Barriers |
|--------------------|--|---|
| Evidence | Recommendations are important for the practitioners. | The evidence is weak |
| Potential adopters | <p>The ten hospitals has a specialized ALS-team function in Denmark</p> <p>The ALS-physiotherapists has shared the “burning platform” where lack of knowledge was identified.</p> <p>The ALS-physiotherapists face the ALS-patients and wants to do the best for the patients</p> <p>The patient organization is strong and willing to participate in the EBP-process to support the ALS-physiotherapist and put pressure on the hospital leaders.</p> | <p>ALS is a small disease category and could be down prioritized. By the leader or by the ALS-physiotherapist because of high workload.</p> <p>Lack of knowledge about best practice for physiotherapy to ALS-patients.</p> <p>Lack of knowledge to read and understand the NCG. Lack of support from team leader</p> <p>The patient organization might have conflicts of interest.</p> |
| Resources | Possibility to apply for funding | No economics for the EBP-process |
| Environment | Demand to implement guidelines in practice – control system (IKAS) | No knowledge about the existence of the NCG. |
| Evaluation | Demand to monitor guideline use – control system (IKAS) | No measurable standard and indicators given in the NCG. |

Resultater – implementerings interventioner

1. Educational meeting – 10 ud af 10 hospitaler
2. Hotline
3. Udarbejdelse af indikator til evaluering

Indikator: reflekterer journalnotatet brug af den kliniske retningslinje ja/nej

Resultater – Måling af guideline brug

Tværsnitstudie

National Journal audit

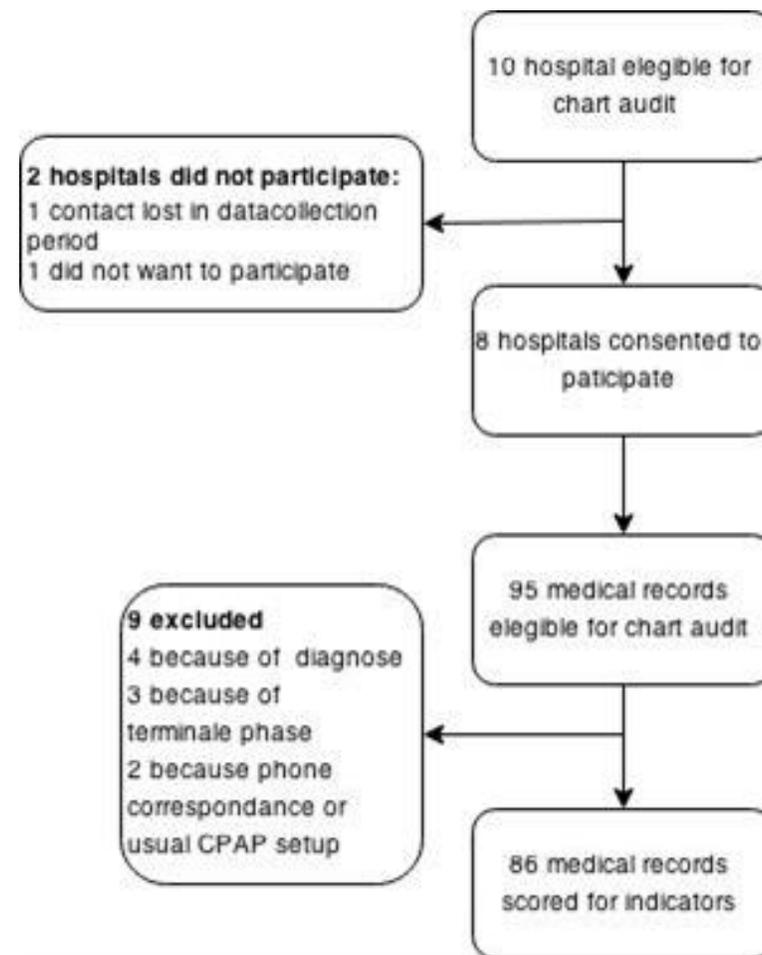

Tabel: inkluderede notater og brug af NCG

| Criteria for inclusion present | | Treatment given according to the guideline | |
|--------------------------------|----|--|----|
| YES | NO | YES | NO |
| 86 | 9 | 84 | 2 |

84

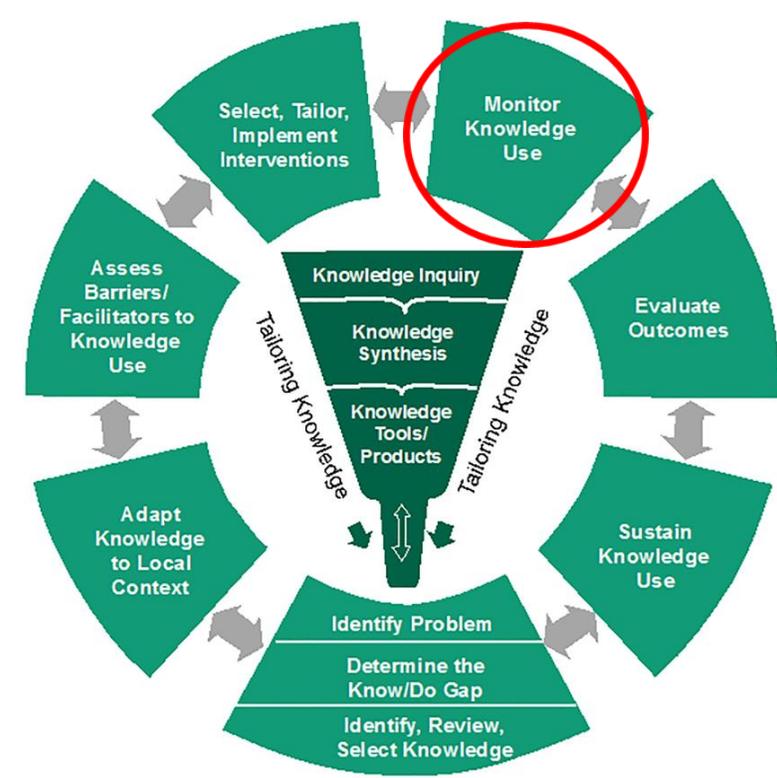

$86 \times 100 = 97,67\% \sim 98\%$

Flowchart: rekruttering til audit

Konklusion

Den kliniske retningslinje til patienter med ALS, anvendes i vid udstrækning på de danske hospitaler med ALS-team.

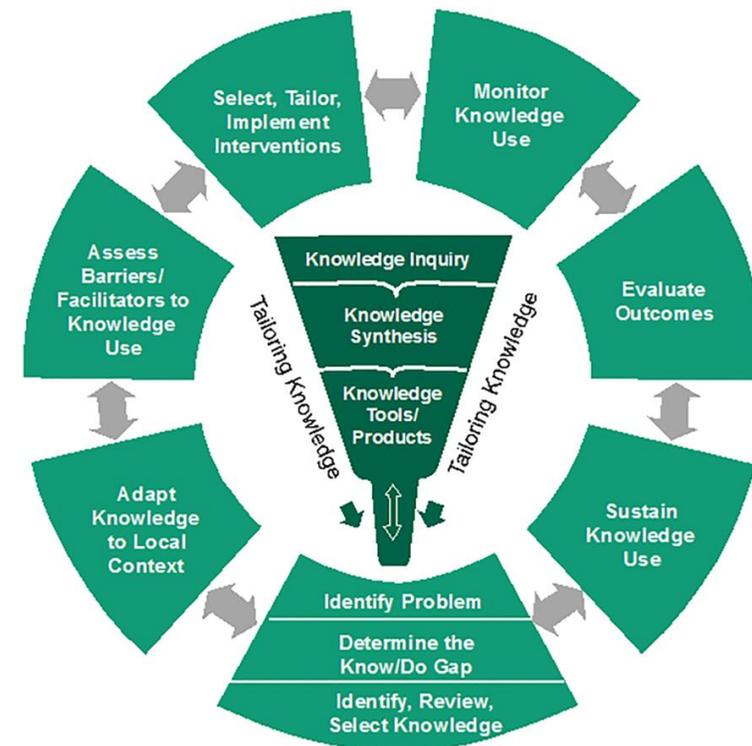

Diskussion

- Udvikling af den kliniske retningslinje
 - Andre studier finder brug i 56% (Rutten et al, 2010) og 67% (Hendrick et al, 2013) af patient kontakter
 - Lignende udviklingsproces indenfor ALS finder brug 89% af patient kontakter (van den Berg et al, 2004)

Implikationer

- Tænk på implementering før udvikling af en klinisk retningslinje (fx KTA).
- Umagen værd at tænke monitorering ind i opbygning af klinisk retningslinje

Taksigelser

- Hans Lund, Professor, Centre for Evidence-based Practice, Western Norway University of Applied Sciences.
- Lise Buus, Projekt- og udviklingsterapeut, MPH, Nordsjællands Hospital – Hillerød.
- Ole gredal, dr med, Rehabiliteringscenter for Muskelsvind.
- ALS-fysioterapeuterne fra hospitalerne: Bispebjerg, Glostrup, Hillerød, Roskilde, Odense, Vejle, Århus, Viborg, Holstebro, Ålborg
- Danske Fysioterapeuter
